Version History

Version	Date	Author	Details
0.1	7 th August 2026	John Price	First draft of the procedural instructions.
1	7 th August 2026	John Price	First version of the procedural instructions.

Document Purpose

The purpose of this document is to provide the reader with information regarding the **Altus POL Migration SharePoint** app.

This application requires consent to be granted so that it can retrieve information from Project Online only.

Document Type

This is a procedural 'follow the bouncing-ball' type of document. It is highly detailed and is designed for the user to follow the steps to complete the end-to-end data migration. There are certain areas where scripts need to be modified. Examples of these are provided to assist the reader with the script modifications.

Frequently Asked Questions

We have created a separate document covering frequently asked questions. This can be accessed via this link and covers all migration process:

[POL - Frequently Asked Questions](#)

Altus POL Migration SharePoint app

Overview

The Altus migration requires permissions to an Enterprise/App Application which grants permissions within the customers Azure Tenant.

⚠ Note: The above-mentioned permission provides the application access to all SharePoint sites in the customers' M365 environment.

Selected.Sites permission

What is required?

The Azure application requires the Selected.Sites permission so that the following data can be exported from Project Online:

1. All lookup tables from Project Online.

What do I need to do?

As such, for the data migration to proceed you will need to create your own following the steps in the next section of this document noting that Sites.Selected permission is required to connect to your Project Online environment.

⚠ Note, a user with M365 Administrator privileges will need to setup this application in the steps listed below.

Creating your own application

The application will require these settings if you create it manually.

Setting	Details
API Name	Office 365 SharePoint Online
Permission	Sites.Selected
Type	Delegated
Granted through	Admin Consent
Granted by	An administrator

Steps to manually create this application in Azure:

Quick Summary:

1. Sign in to **Azure**.
2. Open **Microsoft Entra ID**.
3. Open **App registrations**.
4. Click **New** registration.
5. Enter a **name** (e.g. Altus SharePoint Access App).
6. Choose **Single tenant only - MSFT**. (this can be changed depending on the audience of the app).
7. Click **Register**.
8. Open **Manage > API permissions**.
9. Click **Add a permission**.
10. Choose **SharePoint Online**.
11. Choose **Delegated permissions**.
12. Tick **Sites.Selected**
13. Click **Add permissions**.
14. Click **Grant admin consent**.
15. Open **Manage > Authentication (Preview)**
16. Click **Add Redirect URI**
17. Choose **Mobile and desktop applications**
18. Copy and Paste into the text box <http://localhost>
19. Click **Configure**
20. Go to Overview and copy the Application (client) ID, this is the ID you will use in the scripts (where prompted).
21. Run the script: **BYOPrincipal-GrantPermission.ps1**

Create an Azure App Application

1. Sign in to Azure.

2. Open Microsoft Entra ID.

Create an Azure App Application

4. Click New registration.

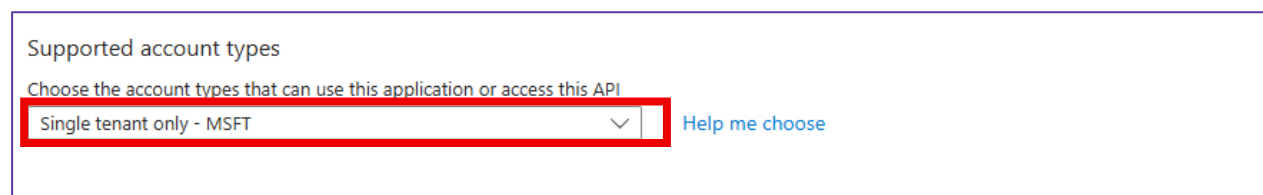

The screenshot shows the 'MSFT | App registrations' page in the Azure portal. The 'New registration' button is highlighted with a red box. The left sidebar shows the 'App registrations' menu item selected. The main area displays a list of applications with tabs for 'All applications', 'Owned applications', 'Deleted applications', and 'Deactivated applications'. A message at the bottom states: 'This account isn't listed as an owner of any applications in this directory. View all applications in the directory'.

5. Enter a name (e.g. Altus SharePoint Access App)

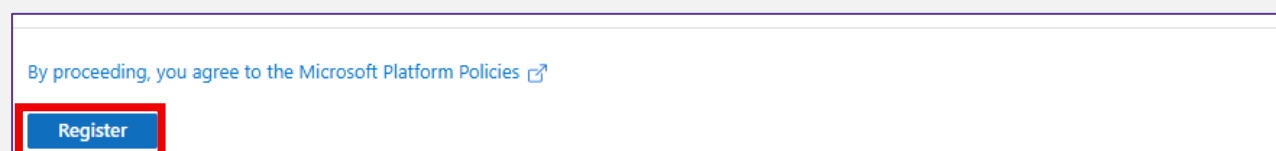

The screenshot shows the 'Register an application' form. The 'Name' field is highlighted with a red box and contains the text 'Altus SharePoint Access App'. The field is labeled '* Name' and has a description: 'The user-facing display name for this application (this can be changed later)'. A green checkmark is visible at the end of the input field.

6. Choose **Single tenant only - MSFT**. (this can be changed depending on the audience of the app).

The screenshot shows the 'Supported account types' section. The dropdown menu is highlighted with a red box and shows 'Single tenant only - MSFT' selected. A 'Help me choose' link is visible to the right of the dropdown.

7. Click Register.

The screenshot shows the bottom of the registration form. The 'Register' button is highlighted with a red box. Above the button, there is a link: 'By proceeding, you agree to the Microsoft Platform Policies'.

Create an Azure App Application

Microsoft APIs

APIs my organization uses

My APIs

Commonly used Microsoft APIs

**Microsoft Graph**

Take advantage of the tremendous amount of data in Office 365, Enterprise Mobility + Security, and Windows 10. Access Microsoft Entra ID, Excel, Intune, Outlook/Exchange, OneDrive, OneNote, SharePoint, Planner, and more through a single endpoint.

**Azure Rights Management Services**

Allow validated users to read and write protected content

**Azure Service Management**

Programmatic access to much of the functionality available through the Azure portal

**Dynamics CRM**

Access the capabilities of CRM business software and ERP systems

**Intune**

Programmatic access to Intune data

**Office 365 Management APIs**

Retrieve information about user, admin, system, and policy actions and events from Office 365 and Microsoft Entra ID activity logs

**OneNote**

Create and manage notes, lists, pictures, files, and more in OneNote notebooks

**Power Automate**

Embed flow templates and manage flows

**Power BI Service**

Programmatic access to Dashboard resources such as Datasets, Tables, and Rows in Power BI

**SharePoint**

Interact remotely with SharePoint data

11. Choose Delegated permissions.

Request API permissions

< All APIs

SharePoint

<https://microsoft.sharepoint.com> [Docs](#)

SharePoint APIs are available via the Microsoft Graph API. You may want to consider using Microsoft Graph instead.

What type of permissions does your application require?

Delegated permissions

Your application needs to access the API as the signed-in user.

12. Tick Sites.Selected

Configured permissions

Applications are authorized to call APIs when they are granted permissions by users/admins as part of the consent process. The list of configured permissions should include all the permissions the application needs. [Learn more about permissions and consent](#)

+ Add a permission ✓ Grant admin consent for Sensei Productivity

API / Permissions name	Type	Description	Admin consent requ...	Status
Microsoft Graph (2)				
Sites.Selected	Delegated	Access selected Sites, on behalf of the signed-in user	No	✓ Granted for Sensei Prod... ...
User.Read	Delegated	Sign in and read user profile	No	✓ Granted for Sensei Prod... ...

13. Click Add permissions.

Create an Azure App Application

14. Click Grant admin consent for MSFT.
