Version History

Version	Date	Author	Details
0.1	24 th April 2026	John Price	First draft of the procedural instructions.
1	24 th April 2026	John Price	First version of the procedural instructions.
2	8th July 2026	Alexandra Jacquet	Updates of FAQ link
3	14 th July 2026	John Price	Updated to make the AllSites.Manage permission scope more explicit to the reader.
4	23 rd July 2026	John Price	Updates to provide further information about why we need this permission.

Document Purpose

The purpose of this document is to provide the reader with information regarding the **Altus POL Migration SharePoint** app.

This application requires consent to be granted so that it can retrieve information from SharePoint Online for all sites.

Document Type

This is a procedural ‘follow the bouncing-ball’ type of document. It is highly detailed and is designed for the user to follow the steps to complete the end-to-end data migration. There are certain areas where scripts need to be modified. Examples of these are provided to assist the reader with the script modifications.

Frequently Asked Questions

We have created a separate document covering frequently asked questions. This can be accessed via this link and covers all migration process:

[POL - Frequently Asked Questions](#)

Altus POL Migration SharePoint app

Overview

The Altus migration requires permissions to an Enterprise/App Application which grants permissions within the customers Azure Tenant.

Office 365 SharePoint Online (1)						
Office 365 SharePoint Online	AllSites.Manage	Read and write items and lists in all site collections	Delegated	Admin consent	An administrator	...

⚠ Note: The above-mentioned permission provides the application access to all SharePoint sites in the customers' M365 environment.

AllSites.Manage permission

What is required?

The Azure application requires the AllSites.Manage permission so that the following data can be exported from Project Online:

1. All lookup tables from Project Online.
2. All SharePoint list items such as Risks and issues.
3. All SharePoint documentation.

Why won't lower permissions work?

When we developed our scripts to migrate the data between Project Online and Altus, we investigated using lower permissions such as AllSites.Read and Sites.Selected.

Unfortunately, these lower permissions do not permit us to iterate through the sub-sites to retrieve the SharePoint data.

This is due to a by-design choice by Microsoft to exclude sub-sites from the Sites.Selected and AllSites.Read permission.

What options do you have?

As such, for the data migration to proceed you will need either

1. Grant consent to this application or
2. Create your own following the steps in the next section of this document noting that AllSites.Manage permission is required.

Grant Consent

There are two options here:

1. Grant permissions to this application **OR**
2. Create an Azure App Application with the following permissions:

If you wish to grant consent to the application, please click on this link:

https://login.microsoftonline.com/common/adminconsent?client_id=30b4ad0b-d939-4cd4-bb6d-fa2d39fb4694&redirect_uri=https%3A%2F%2Faltus.pro%2Fcontent%2FConsentSuccess.html

To proceed, select **Accept** and this will grant the delegated permissions.

Note: The user will require M365 Global Administrator permissions to grant this consent.

The image shows a Microsoft Admin Consent dialog box. At the top is the Microsoft logo. Below it is the email address jonathan.joestar@lscx.onmicrosoft.com. The main heading is 'Permissions requested' with the subtitle 'Review for your organization'. Below this is the application icon and name 'Altus - POL Migration - SharePoint' with the status 'unverified'. A warning states: 'This application is not published by Microsoft or your organization.' The permissions listed are: 'Read and write items and lists in all site collections' and 'Sign in and read user profile'. A note explains that accepting grants access to resources for all users. It also mentions that accepting means allowing the app to use data as specified in their terms of service and privacy statement, with a link to 'https://myapps.microsoft.com. Show details'. At the bottom, there is a link to 'Report it here' if the app looks suspicious. At the very bottom are two buttons: 'Cancel' and 'Accept'.

Permissions requested

Review for your organization

 Altus - POL Migration - SharePoint
unverified

This application is not published by Microsoft or your organization.

This app would like to:

- ✓ Read and write items and lists in all site collections
- ✓ Sign in and read user profile

If you accept, this app will get access to the specified resources for all users in your organization. No one else will be prompted to review these permissions.

Accepting these permissions means that you allow this app to use your data as specified in their [terms of service](#) and [privacy statement](#). You can change these permissions at <https://myapps.microsoft.com>. [Show details](#)

Does this app look suspicious? [Report it here](#)

Cancel Accept

Creating your own application

The application will require these settings if you create it manually.

Setting	Details
API Name	Office 365 SharePoint Online
Claim Value	AllSites.Manage
Permission	Read and write items and lists in all site collections
Type	Delegated
Granted through	Admin Consent
Granted by	An administrator

Steps to manually create this application in Azure:

Quick Summary:

1. Sign in to **Azure**.
2. Open **Microsoft Entra ID**.
3. Open **App registrations**.
4. Click **New** registration.
5. Enter a **name** (e.g. Altus SharePoint Access App).
6. Choose **Single tenant only - MSFT**. (this can be changed depending on the audience of the app).
7. Click **Register**.
8. Open **Manage > API permissions**.
9. Click **Add a permission**.
10. Choose **SharePoint Online**.
11. Choose **Delegated permissions**.
12. Tick **AllSites.Manage**.
13. Click **Add permissions**.
14. Click **Grant admin consent**.
15. Open **Manage > Authentication (Preview)**
16. Click **Add Redirect URI**
17. Choose **Mobile and desktop applications**
18. Copy and Paste into the text box <http://localhost>
19. Click **Configure**
20. Go to Overview and copy the Application (client) ID, this is the ID you will use in the scripts (where prompted).

Create an Azure App Application

1. Sign in to Azure.

APIs my organization uses

My APIs

Commonly used Microsoft APIs

**Microsoft Graph**

Take advantage of the tremendous amount of data in Office 365, Enterprise Mobility + Security, and Windows 10. Access Microsoft Entra ID, Excel, Intune, Outlook/Exchange, OneDrive, OneNote, SharePoint, Planner, and more through a single endpoint.

**Azure Rights Management Services**

Allow validated users to read and write protected content

**Azure Service Management**

Programmatic access to much of the functionality available through the Azure portal

**Dynamics CRM**

Access the capabilities of CRM business software and ERP systems

**Intune**

Programmatic access to Intune data

**Office 365 Management APIs**

Retrieve information about user, admin, system, and policy actions and events from Office 365 and Microsoft Entra ID activity logs

**OneNote**

Create and manage notes, lists, pictures, files, and more in OneNote notebooks

**Power Automate**

Embed flow templates and manage flows

**Power BI Service**

Programmatic access to Dashboard resources such as Datasets, Tables, and Rows in Power BI

**SharePoint**

Interact remotely with SharePoint data
