15	24 th July 2026	John Price	Q1.8 to clarify how many projects you can export/import in one script run.

Document Purpose

The purpose of this document is to provide the reader with answers to frequently asked questions regarding the Altus Project Online Data Migration tools and approaches.

It is an accompanying document for the four procedural documents that cover the project online migration tools and approaches.

Migration Overview

Introduction

On the 5th September 2025 Microsoft announced that it had brought forward the original retirement of Project Online from 2030 to 30th September 2026.

From this date, Project Online will be shut down and no longer accessible. All Project Web App (PWA) access, data, and integrations will stop working.

What is being retired?

Project Online will be fully decommissioned. This includes the project subsites where users stored list-based information such as Risks, Issues, Actions, and Project Documentation.

What will remain available?

The following applications will remain available thew new and existing customers:

- Project Desktop (Stand-alone and M365 versions).
- [Project Server Subscription Edition](#).

Why is Microsoft retiring Project Online?

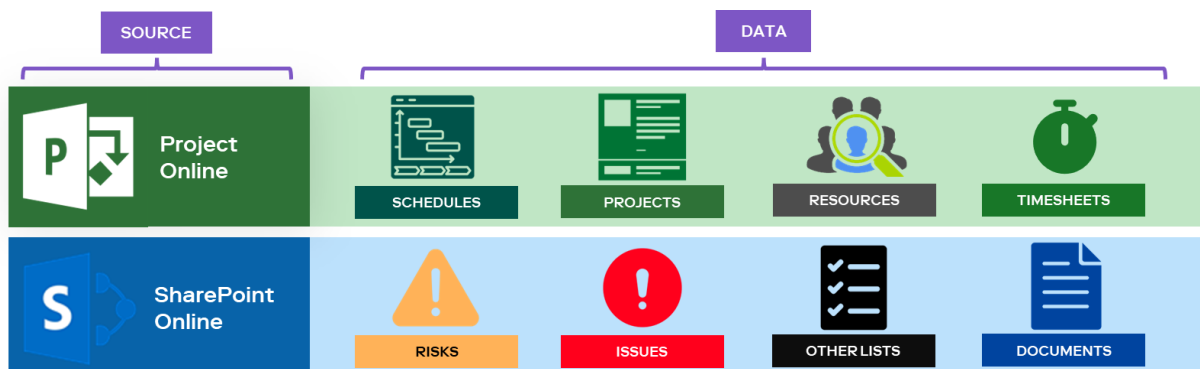

Microsoft has stated that the Project Online legacy architecture (built on older SharePoint services) limits the ability to deliver modern cloud, AI and integration features. Innovation investment is now focused on newer platforms built on the Microsoft Power Platform, Dataverse, and AI-enabled capabilities (like Planner Premium/Project Manager Agent).

Altus Migration Solution

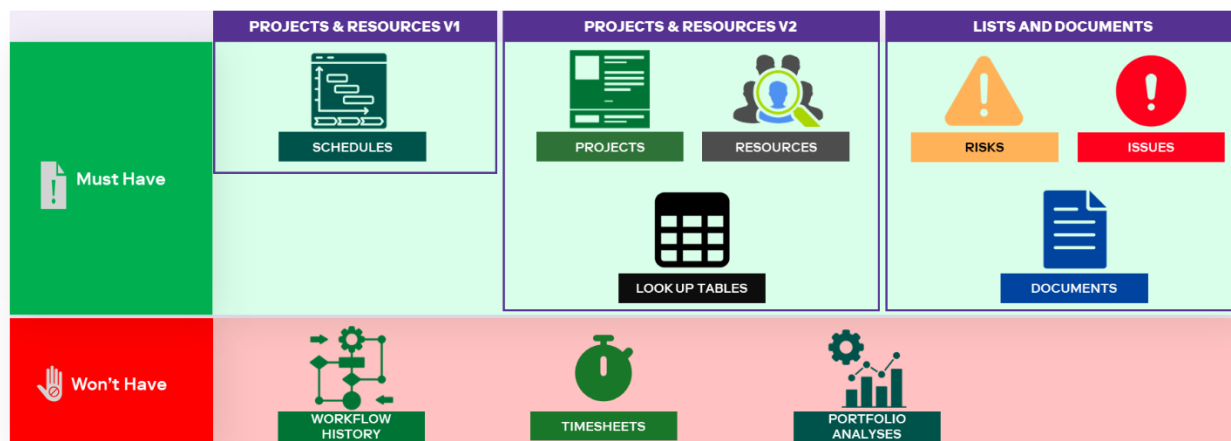

To assist new and existing Altus customers, we have created some scripts and an approach to enable customers to retain their project online data when migrating to Altus pro.

Data to be migrated

The following data has been identified for data migration as part of the retirement of Project Online:

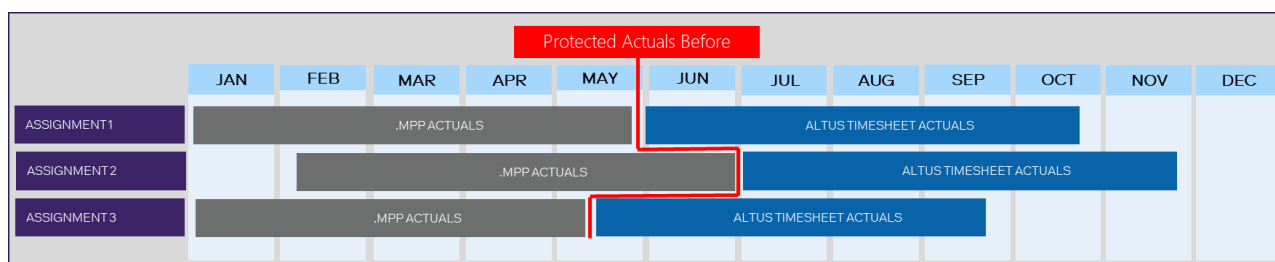

The process in this document covers **Projects & Resources V1**:

Timesheets Data Approach

The Altus approach is to ensure that Project Desktop actuals are not overwritten when approved Altus timesheets are imported. As such, we have devised an approach using a date to honour 'protected actuals' that will work by:

- Ensuring that actuals in the .MPP schedule file are not overwritten, we have implemented logic to prevent this from occurring.
- This is achieved using an assignment-level date field referred to as **Protected Actuals Before**.
- This is the date when approved Altus timesheets actuals are first imported to the .MPP file.
- This ensures that existing historical actuals are protected and not overwritten when approved timesheets actuals are imported to the .MPP file.
- Note, this date is set at the assignment-level rather than the task-level. This ensures that actuals are protected at the appropriate level and cater for timesheet actuals being processed by different resources at different dates.
- This date enables Partners and Customers to avoid migrating timesheets as this date will preserve historical actuals in the MPP.

Frequently Asked Questions

This section covers common questions that we've been asked about this migration process. It is grouped into sections based on which part of the migration process you are running

General

Q1.1 | Can the scripts be used to extract data from Project Server?

Question:

Can the scripts be used to extract data from Project Server?

Answer:

The migration scripts have been configured to extract data from Project Online and SharePoint Online.

The scripts and approach will need to be updated to extract data from Project Server. Our intention is to start investigating this in Q4-2026 once the Project Online data migrations are complete.

Q1.2 | Who can use the migration scripts?

Question:

Who can use the migration scripts?

Answer:

The Altus migration scripts are only designed to be used by Altus Partners when assisting their clients with their Project Online data migrations to Altus.

The scripts and approach must not be directly shared with customers or clients.

Q1.3 | Is there a cost associated with the Altus schedule migration scripts?

Question:

Is there a cost associated with the Altus schedule migration scripts?

Answer:

We are offering these scripts as part of the Altus subscription to provide a simple and robust method to move data from Project Online to Altus.

We also offer a fixed-price package for customers who wish to engage us to complete the data migration for them.

Altus partners may wish to offer their own migration package here to assist their clients with their migrations from Project Online to Altus.

Q1.4 | Will there be a User Interface created for the scripts?

Question:

Will there be a User Interface created for the scripts?

Answer:

Unfortunately, we won't have time to create a user interface for the data migration scripts. We need to complete the tools and provide Partners & Customers with six clear months so that they can complete the data migration prior to

Q1.5 | Will the scripts work with GCC-High environments?

Question:

Will the scripts work with GCC-High environments?

Answer:

Yes, our migration scripts can be run to migration data from Project Online to Altus environments that have been deployed into GCC-High environments.

These additional commands need to be added to the scripts before running them:

1. Start PowerShell with the additional setting **-AzureEnvironment 'USGovernmentHigh'**.
2. Set the global variable **\$global:Environment = 'AzureUSGovernment'**.

Q1.6 | Which Altus documents can I share with my clients?

Question:

Which Altus documents can I share with my clients?

Answer:

The following Altus document can be shared with your clients and has been created directly with the intention of being customer facing:

 Name	
  Project Online Data Migration - Altus POL Migration SharePoint app.docx	...  
  Project Online Data Migration - Prerequisites Walkthrough.pptx	...  
  Project Online Data Migration - Prerequisites.docx	...  
  Project Online Data Migration - Technical Readiness for Project Online.pptx	...  

The remaining documentation must not be shared with customers and can only be used by Altus Partners.

Q1.7 | Why does the Azure application require the AllSites.Manage permission?

Question:

Why does the Azure application require the AllSites.Manage permission?

Answer:

The Azure application that generates the Application ID (Client ID) is required so that the scripts can download:

1. The Project Online lookup tables.
2. All SharePoint Online List items and documents.

The application requires the AllSites.Manage permission so that it can connect to each Project Online Sub-site to export the SharePoint list items and documents. During our process to develop the scripts we investigated lower permissions including AllSites.Read. However, this did not permit us to connect to the sub-sites to retrieve all of the list data such as risks and issues.

If this isn't permissible, the other option is to grant Sites.Selected permission.

We don't recommend this as it requires the client to share each every sub-site with the azure application which is time consuming and likely to result in sites being missed causing issues for the data migration.

Q1.8 | How many projects can you export/import at once?

Question:

How many projects can you export/import at once?

Answer:

When running the export and import process, we recommend the following:

1. Export in batches of up to 250 projects. If you have more than 250 projects, use the ODATA filtering (covered in the procedure document) to export these in batches.
2. Import projects in similar batches of up to 250 projects, otherwise you will get the issue covered on page 27 of the troubleshooting document.

Projects Online Data

Q2.1 | Will Local Resources be migrated to Altus?

Question:

Will Local Resources be migrated to Altus?

Answer:

No, however, these will be retained in your Microsoft Project schedule and can be substituted with Altus Bookable Resources at a later stage.

Q2.2 | Can the migration process be run multiple times?

Question:

Can the migration process be run multiple times?

Answer:

Yes, the schedule migration process can be run multiple times. When run subsequent times, the Altus schedule will only be updated where items in the source .MPP files have been changed.

This also applies to any changes made to project and resource information.

Q2.3 | Will time-phased data be migrated to Altus?

Question:

Will time-phased data be migrated to Altus?

Answer:

We are working on an enhancement to the Altus scheduler to enable time-phased cost data to be published to the Altus finance application. This is forecast to be released in early May 2026.

More information on this enhancement can be accessed here:

portal.productboard.com/yyt7thvepisnv8mh5ifqk1yo/c/116-altus-tasks-time-phased-effort-and-resourcing

Q2.4 | Will custom fields be migrated to Altus?

Question:

Will custom fields be migrated to Altus?

Answer:

Yes, our scripts enable users to migrate Project, Resource, and Task custom fields from Project Online to Altus.

Note, there are some limitations here, for example:

Non-text based lookup tables for Project Online task custom fields cannot be migrated as these are not output by the Microsoft Project Online export scripts.

Q2.5 | Will baselines and resource rates be migrated to Altus?

Question:

Will baselines and resource rates be migrated to Altus?

Answer:

Yes, you can migrate all 11 baselines from Project Online to Altus using these scripts.

The script also migrates all cost rates for each resource in Project Online to the bookable resource in Altus.

Note, in Project Online, there are two types of baselines that can be set:

Type	Baseline Numbers	Details
Protected	0 – 5	Can be locked down so only certain security groups can set.
Unprotected	6 – 10	Open to any user to set these baselines.

Q2.6 | Will timesheet data be migrated to Altus?

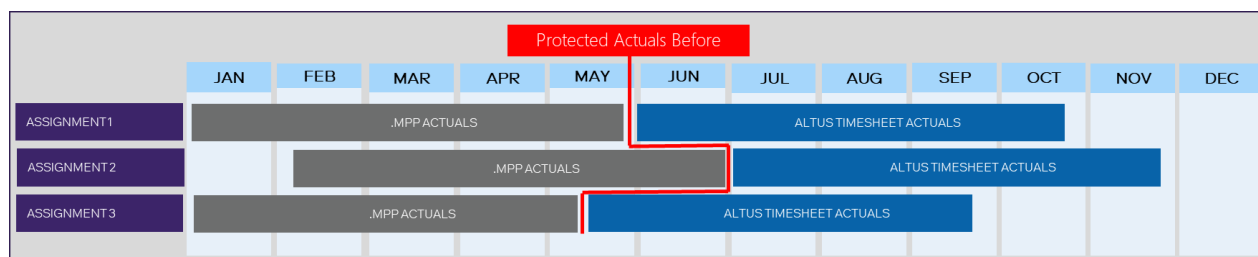

Question:

Will timesheet data be migrated to Altus?

Answer:

No, as we wanted to avoid opening our customers up to a significant Dataverse storage expense. Our approach for timesheet actuals is as follows:

- To ensure that actuals in the .MPP schedule file are not overwritten, we have implemented logic to prevent this from occurring.
- This is achieved using an assignment-level date field referred to as **Protected Actuals Before**.
- This is the date when approved Altus timesheets actuals are first imported to the .MPP file.
- This ensures that existing historical actuals are protected and not overwritten when approved timesheets actuals are imported to the .MPP file.
- Note, this date is set at the assignment-level rather than the task-level. This ensures that actuals are protected at the appropriate level and cater for timesheet actuals being processed by different resources at different dates.
- This date enables Partners and Customers to avoid migrating timesheets as this date will preserve historical actuals in the MPP.

Q2.7 | Will cost data be migrated to Altus?

Question:

Will cost data be migrated to Altus?

Answer:

We have built a new API which enables all costs to be published from Project Desktop to the Altus Finance application including for Work, Material, and Cost Resources. Further details on this will be provided in the May 2026 Partner meeting.

Q2.8 | How long does the schedule migration take?

Question:

How long does the schedule migration take?

Answer:

Below are the times we have experienced when running this process. Network speeds and schedule complexity will affect these timings:

- **Export Script:** Approximately 15-20 seconds to export each .MPP and their associated JSON files.
- **Resource Import Script:** Approximately 1-2 minutes per 100 resources.
- **Project Import Script:** Approximately 15-20 seconds per project.
- **Schedule Publish:** Schedule publish times depend on the size and complexity of the .MPP file. The table below provides additional information on this.

Schedule Size	Number of Tasks	Time to Publish
Small	<200	< 30 seconds
Medium	200 – 1,000	30 seconds - 1 minute
Large	1,000+	1+ minutes

Schedules with larger number of rows, will require more time.

Q2.9 | You've specified that Workflow History and Portfolio Analyses are "Won't have", can you explain why?

Question:

You've specified that Workflow History and Portfolio Analyses are "Won't have", can you explain why?

Answer:

In our analyses of the data in Project Online, the workflow history and Portfolio Analyses were the parts of the solution with the least user traffic and least data captured. As such, we have prioritised the other data for migration in our tools and approaches.

Regarding project workflows, the projects can be easily moved to the relevant phase in the Altus Business Process Flow (BPF) by the end user. To move these for multiple projects, a tool like XRMtoolbox can be utilised.

The Portfolio Analyses data in Project Online has a structure which is vastly different to the data structure in the Altus Strategic Portfolio Analyser. Also, the effort to add this into Altus is small so scripting will likely result in minimal time saving for the data migration.

Q2.10 | How will I know if the migration has been successful?

Question:

How will I know if the migration has been successful?

Answer:

Our migration tool provides log files to the end user who is running the migration. These are created when the scripts finish running and provide verbose information about the status of the migration including all failures so that the end user can make adjustments to their data and re-run the migration.

Q2.11 | What about assignments for non-System Users?

Question:

What about assignments for non-System Users?

Answer:

For assignments to be honoured in Altus, the person must appear in the **System User** table. They don't need to be active (Bookable resources can be linked to inactive system users).

Where the person doesn't appear in the system user table, a corresponding bookable resource cannot be created.

Assignments which exist in MS Project which aren't assigned to Altus bookable resources won't be published to Altus.

- The task will be published to Altus.
- The assignment will be removed, so that task will appear unassigned in Altus.

Q2.12 | Can I choose which task custom fields are mapped to Altus?

Question:

Can I choose which task custom fields are mapped to Altus?

Answer:

Yes, you can decide which custom fields you want to map between Project Online and Altus. The scripts migrate the Enterprise Custom fields to local custom fields. When you run this script, you can decide which local fields the enterprise custom field data will be migrated to.

You can also decide how these map to Altus custom fields.

Below is a link to a one-pager and a video which covers this off in more details:

- [Project Online Data Migration - 7.3 Map Task Custom Fields in Altus](#)
- [Task custom field mapping Project Online to Altus.pdf](#)

Q2.13 | Why is the Start Date different between Altus and MS Project?

Question:

Why is the Start Date different between Altus and MS Project?

Answer:

There may be instances where the dates differ between Altus and MS Project. This is due to the way in which the start date is set.

In **MS Project**, the Start Date is set at the project level via this setting....

The screenshot shows the 'Project Details' page in MS Project. The 'Start' date is highlighted with a red box and set to 10/6/2025. The page includes a sidebar with navigation links like 'Project Status', 'Stakeholders', 'Resources', 'Forecast', 'Risks and Issues', 'Document Management', 'Sustainability Cost', 'Schedule', 'Status Report', 'Project Allocations', and 'Project Site'. The main content area shows 'Basic Info' with fields for 'Name', 'SAP Project ID', and 'Description'. The 'Description' field contains a detailed text about automating workflows for critical environmental tasks.

In **Altus**, the start date is automatically calculated based on the start date of the earliest task, as below....

The screenshot shows the 'Tasks' view in Altus. The 'Start' column is highlighted with a red box. The table lists tasks with their start and finish dates, percent complete, and effort. The tasks are grouped by phase: Initiate, Develop and Approve, Planning, and Identify.

Name	Assigned To	Start	Finish	Percent Complete	Effort (h)
Initiate		1/12/2026	12/31/2026	100%	0
Develop and Approv...		1/12/2026	1/12/2026	100%	0

Q2.14 | Can I migrate hierarchical lookup tables to Altus?

Question:

Can I migrate hierarchical lookup tables to Altus?

Answer:

Yes, our scripts enable you to migrate hierarchical lookup tables to Altus. However, Dataverse doesn't currently have functionality to show tree view style lookup tables in Power Apps.

In Altus, these hierarchical lookup tables will appear as follows:

CustomerEnhancements > Tables > RBS

Table properties			Schema
Name	Primary column	Description	Columns
RBS	Name	Hierarchical Resource Breakdown Structure (RBS) from Project Online for the associated resource.	Relationships
Type	Last modified		Keys
Standard	3 weeks ago

Q2.15 | How many MS Project task fields can I map to Altus?

Question:

How many MS Project task fields can I map to Altus?

Answer:

Our migration process migrated Enterprise Project Online custom fields to local fields in MS Project desktop. The table below articulates how many local fields are available to map.

MS Project Desktop Local Custom Field Type	Number Available to Use
Date	10 (Date1 - Date10)
Duration	10 (Duration1 - Duration10)
Finish	10 (Finish1 - Finish10)
Flag	20 (Flag1 - Flag20)
Number	20 (Number1 - Number20)
Start	10 (Start1 - Start10)
Text	26 (Text1 - Text26)
Outline Code	10 (Outline Code1 - Outline Code10)

If you have more task level custom fields that are permitted above, you won't be able to map these between MS Project desktop and Altus.

However, you can create these fields directly in Altus tasks and update these directly in the Altus schedule.

Q2.16 | How does the schedule migration handle different currencies?

Question:

How does the schedule migration handle different currencies?

Answer:

Our migration scripts can migrate schedules with different currencies. The set -ProjectCurrency parameter can be used for this purpose, see example below:

```

571
572 .EXAMPLE
573 Set-ProjectCurrency
574
575 .EXAMPLE
576 Set-ProjectCurrency -currencyCode "USD" -currencySymbol "$" -currencyDigits 2
577 #>
578 no commands
579 function Set-ProjectCurrency {
580     param (
581         [string]$currencyCode = "AUD",
582         [string]$currencySymbol = "$",
583         [int]$currencyDigits = 2
584     )

```

Q2.17 | Can I migrate the project description to Altus?

Question:

Can I migrate the project description to Altus?

Answer:

Unfortunately, this is not outputted via the Microsoft export scripts that we have utilised. As such, this would have to be migrated manually.

Q2.18 | What format is the data exported to?

Question:

What format is the data exported to?

Answer:

The data migration process exports the following outputs:

- Schedules to .MPP format (which is the default format for Microsoft Project files).
- All other data to .JSON format.

Q2.19 | What happens if I have already created my resources in Altus?

Question:

What happens if I have already created my resources in Altus?

Answer:

Our migration scripts will look for matching bookable resource names based on the login name of the Project Online user. If there is a match, assignments will be attributed to this user. If no match, a new bookable resource will be created.

This applies to both enterprise generic and named resources.

Local resources aren't matched in this way and tasks assigned to these resources will appear unassigned in Altus (although the assignment will be retained in MS Project0).

Resource Import

There are two options for Resource Import in this script. 'Named Only' or 'Generic and Named'.

- Read all existing Named Bookable Resources in your Dataverse environment
- Read all existing System Users in your Dataverse environment
- Read all of the Project Online resources json files that were extracted from your Project Online environment, deduplicate them and consolidate them according to type
- For each unique Project Online Named resource, the script will;
 - Look for a matching Named Bookable Resource (based on the login name of the Project Online user)
 - If a match is found, the Resource properties will be updated and a log entry will be noted
 - Look for a matching System User (based on the login name of the Project Online user)
 - If no match is found no action will be taken and a log entry will be noted
 - If there is no matching Named Bookable Resource and a matching System User is found

Q2.20 | Can I migrate Master Schedules to Altus?

Question:

Can I migrate Master Schedules to Altus?

Answer:

Unfortunately, you won't be able to migrate master schedules to Altus. Altus currently doesn't support master schedules.

The individual schedules will need to be exported and migrated to Altus as separate projects.

If you would like us to consider this capability in Altus, please feel free to submit this as an idea via this form: [Under Consideration - Altus Product Roadmap | Product Roadmap](#)

Q2.21 | Can I migrate custom fields with formulas?

Question:

Can I migrate custom fields with formulas?

Answer:

Unfortunately, the scripts cannot be used to migrate custom fields with formulas. These will need to be manually created in the relevant tables once the migration has been completed as the fields that the formulas reference need to have been created first.

SharePoint Online List Items

Q3.1 | What lists do scripts migrate OOTB?

Question:

What lists do scripts migrate OOTB?

Answer:

We have templated the Risks and Issue registers that come with Project Online. Our scripts map all the OOTB fields from these lists to the Altus Risk and Issues tables.

Q3.2 | Can I migrate list custom fields?

Question:

Can I migrate list custom fields?

Answer:

Yes, you can migrate custom fields from the SharePoint Online lists to the Altus registers. Our procedure document provides script blocks that you can use for this. Supported field types are:

- Boolean
- Date and Time
- Date Only
- Decimal
- Lookup
- Money
- Number
- Options
- Text

Q3.3 | Can I migrate list custom lists?

Question:

Can I migrate list custom lists?

Answer:

Yes, you can migrate custom lists from SharePoint Online to Altus. We have provide some example scripts for how this can be done.

SharePoint Online Documents

Q4.1 | Will metadata and version history be migrated?

Question:

Will metadata and version history be migrated?

Answer:

Yes, our migration tooling downloads the documents from SharePoint and includes the metadata tags and version history.

Q4.2 | Will sub-folders be migrated?

Question:

Will sub-folders be migrated?

Answer:

Yes, our migration tooling downloads the sub-folders for each project and will honour files within each of these folders.

Q4.3 | Where can we migrate documents to?

Question:

Where can we migrate documents to?

Answer:

You have three options for where documents can be migrated to?

1. Teams / Groups created for each project in Altus.
2. Create a new non-Project Online SharePoint document library.
3. Use an existing non-Project Online SharePoint document library.

Once the export process has been completed, you can migrate your document to one of the above-mentioned locations.
