

Project Online to Altus Data Migration

If you are migrating task custom fields to  MS Project, please run this process.

➤ 1. Export Projects

Run **ExportAllProjects.ps1** to export projects from Project Online.

➤ 2. Export Lookup Tables

Run **ExportLookupTableData.ps1** to export the lookup tables.

➤ 3. Import Lookup Tables

Update **LookupTablesToImport.ps1** then run **ImportLookupTableData.ps1** to import the lookup tables.

➤ 4. Load Lookup tables

Update **Defaults.ps1** with the lookup tables.

➤ 5. Map Custom Fields and Create Resources

Update **ImportResources.ps1** and map custom fields. Run this **AltusPOLMigration.ps1** to create resources.

➤ 6. Map Custom Fields and Create Projects

Update **ImportProjects.ps1** and map custom fields. Run this **AltusPOLMigration.ps1** to create projects.

➤ 7. Map Task Custom Fields via MS Project

Map task custom fields via **Altus Settings**. Run **Publish-MPPsToAltus.ps1** to map the enterprise custom fields to local custom fields.

➤ 8. Run Schedule Migration

Run **Publish-MPPsToAltus.ps1** and specify baselines to migrate.

10. Post Migration Steps

Complete all post-migration steps in Altus.
