

Task Custom Fields | Data migration approach

This process enables customers to retain their data from Project Online and map these to Altus task fields so that they can set and update this data beyond the decommissioning of Project Online.

Note: You don't have to map the local custom fields to Altus custom fields. You have full control determining which local custom fields the enterprise custom fields are mapped to.

The data mapping permits **Date**, **Flag**, **Number**, and **Text** local custom fields to be mapped.
Look-up tables will be converted to Text noting the limitation listed below.

⚠ Note: Only text look-up tables can be mapped. Cost, Duration, Date, and Number aren't available to map.
