

Altus Timesheet | Historical Actuals

How does the Altus timesheet provide visibility of historical task actuals from the schedule?

Timesheet		Microsoft Project Schedule			
Total Assignment Details		Resource / Task Name	Work	Actual Work	Remaining Work
Unit Allocation	100%	Resource Name	601.75 hrs	568.75 hrs	33 hrs
Hours Assigned	26 hours	Task Name	26 hrs	21.5 hrs	4.5 hrs
Hours Submitted	0.25 hours				
Protected Actuals	21.5 hours				
This Timesheet	0 hours				
Hours Remaining	4.25 hours				

Timesheet Field	Details
Hours Assigned	Total hours allocated to the current user for the selected task.
Hours Submitted	Total timesheet actual hours captured in all previous periods.
Protected Actuals	Total actual hours recorded against the task before timesheets were started in Altus.
This Timesheet	Total actuals recorded for the task in this period's timesheet.
Hours Remaining	[Hours Assigned] – [Hours Submitted] – [Protected Actuals] – [This Timesheet]

✓ Protected Actuals will be an exact match to the schedule hours when timesheets are started.

⚠ You will need to ensure you have imported all approved timesheet hours to ensure that the [Remaining Work] and [Hours Remaining] are aligned.

⚠ Once you have started timesheets in Altus, you can no longer manually capture actuals in Microsoft Project. Any hours keyed into Microsoft Project after timesheets have been started will be overwritten when the timesheets are imported into the schedule.
